Mobile web apps with native app features

Franziska Hinkelmann

Native apps allow you to take full advantage of all the device features. The downside? You have to develop, well, native apps. That's a steep learning curve if you are a web developer. But did you know how easy it is to access motion sensors in mobile browsers? Or that that you can access geolocation data?

You can read gyroscope and accelerometer data in your web app and it is stunningly simple. In fact, so simple, that I can show you how to capture motion sensor data with just a few lines of code.
